

This is my design for the pull tab. I designed it to have a hole in the tab to make it easier to pull, with more leverage this time. Unlike the original design which is slippery and hard to grasp, this one is more resilient and practical. This new lid also affords pulling— especially because of the loop. The affordance is mapped to the tab as it indicates where the tearing/pulling should begin. This loop shaped handle acts as both a signifier on how to pull and interact with the seal.
